

BUBBLE BROTHERS

4-SITE HYDRO SYSTEM INSTRUCTIONS

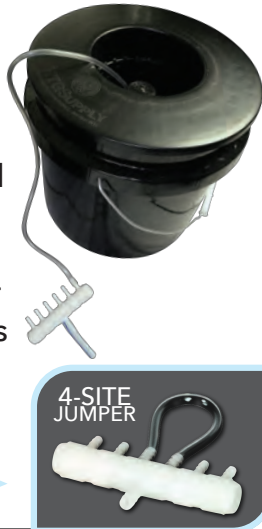

1 It is recommended to place your buckets and pumps in their final resting place(s) to assure you have enough tubing for your system (20' of tubing is included).

2 Thread one end of your tubing down through the hole in the center of the lid. Attach an O2 Stone to that end of the tube.

3 Starting with your farthest bucket(s), run your tubing to your 571 GPH Air Pump and your 6-port air divider. Cut the tube and fix onto one of the divider ports. Jump any 2 ports together with a small piece of tubing to regulate airflow as shown here →

4 Repeat steps 2 and 3 for the other three (3) buckets (See photo at the top).

5 Fill each bucket with water and nutrient solution, just covering your grow medium.

6 Plug in your 571 GPH Air Pump

7 Happy Growing!
