

BUBBLE BROTHERS

INSTRUCTIONS

1 It is recommended to place your buckets and pumps in their final resting place(s) to assure you have enough tubing for your system (50' of tubing included)

2 Thread one end of your tubing down through a hole near the bottom of your RhizoCore bucket lid. Attach an O2 Stone to that end of the tube.

3 Starting with your farthest buckets, run your tubing to your 951 GPH Air Pump and your 6-port "T" adapter. Cut the tube with scissors or a knife and fix the tubing onto one of the ports on the adapter.

4 Repeat steps 2 and 3 for the other five (5) buckets (See photo at the top).

5 Fill each bucket with water just above the center "core" of the RhizoCore bucket Lid.

6 Plug in your 951 GPH Air Pump.
